

# Nejc Ribic

A reliable, self-motivated, problem-solving individual who likes to solve modern problems with the help of teamwork and communication, while sharing a passion for work. My Name is Nejc Ribič and I have competencies in smart work, communications, discipline, teamwork, and most importantly- creating. I see myself further improving my competencies in a professional work driven environment where I could challenge my skills and create something new and useful for what the company provides. I see myself working in a Telecommunication, Technological or Design-driven profession.

## Interests

Photography

Exterior, Interior, UI & UX Designing

Aviation

Car Enthusiast

Fashion

Technology

Music

## Languages

Slovenian	Native
English	Fluent
Croatian	Intermediate
French	Beginner

## Education and Qualifications

**Computer Technician** Aug 2018 - May 2021  
*Šolski Center Krško Sevnica, Krško*

The four-year high school that I have finished in Slovenia, where I have studied and obtained the degree of a Computer Technician gave me a significantly important insight into the present and future technologies, knowledge in some of the programming languages, and other network-oriented experiences that are crucial in today's work for one to be a tech-savvy. One of the main pieces of knowledge I have gained from school is that everything is out there. But not everything should be learned as it is impossible and impractical. By using the power of the Internet, blogs, and search engines one should master his own profession and only gain deep insight into the specifics rather than it all.

## Work experience

**Digital Design** Oct 2019 - Nov 2019  
*Malta, Burmarrad*

This three-week experience of working abroad in Malta, back in 2019 contributed to me with very important new skills and competencies. By directly communicating with our customers, discussing their needs, and negotiating the offers, I further extended my understanding of the English foreign language, improved my perspective of teamwork and communication, which are very important competencies to have within any field of profession. With the help of professional applications and photo manipulative programs such as Adobe Photoshop and Adobe Premiere, I then brought the customer's ideas to life and by further communicating, I completed the final product that went off to the printing.

## Skills

## Publications

---

The following website that I have published online reflects the knowledge I have gained both at the time of studying in high school as from working from abroad, where I combined my passion, knowledge, and my skills for design and came up with the following portfolio of mine which can be world-wide accessed through the following hyperlink **[nejcribic.netlify.com](https://nejcribic.netlify.com)**

I am very proud of the whole process and the ability to realize the vision, and I am also very thankful to all the people that stood by me.

*\*The website serves as my personal portfolio, where I, my passion, hobbies, and work are introduced.*
